

AHMED HAMED FAHMY ELSHRABASY

+201006193690 | New Damietta, Egypt | Ahmed.edu.pt12@gmail.com | [LinkedIn](#) | [Portfolio](#)

OBJECTIVE

AI Automation Specialist bridging the gap between advanced technology and healthcare operations. Combining a solid background in Physical Therapy with hands-on expertise in building and deploying end-to-end automated workflows. Proficient in advanced prompt engineering, centralized administrative dashboards, and optimizing LLM architectures to significantly reduce hallucinations and enhance output reliability. Passionate about leveraging AI agents and intelligent automation to eliminate manual bottlenecks in both business and medical systems, reducing operational overhead and delivering scalable, cost-effective solutions.

EXPERIENCE

AI Automation Specialist (Trainee)

June 2026 – Present

Digital Egypt Pioneers Initiative (DEPI) - AI Automation Track (eYouth/MCIT)

- Architected and implemented production-ready automated workflows using n8n and Make to eliminate manual business and operational tasks.
- Developed secure API integrations, custom webhook triggers, and automated multi-source data processing pipelines.
- Integrated custom AI prompt engineering workflows to handle dynamic system responses with high precision and reliability.

Global Consumer Intelligence (GCI) Trainee

September 2026 – Present

Matsuo-Iwasawa Laboratory, The University of Tokyo

- Participating in an intensive program focused on data analytics, consumer intelligence, and practical AI applications.
- Applying advanced machine learning concepts to real-world business and consumer data strategies.

Undergraduate Clinical Trainee (Physical Therapy)

September – October 2026

Governmental Hospital, Egypt

- Acquired practical experience in clinical workflows, patient data management, and daily healthcare operations.
- Identified operational bottlenecks in clinic management, utilizing this domain knowledge to design highly relevant automation systems for healthcare environments.

PROJECTS

Omni Loop – AI-Powered Supply Chain Automation (Graduation Project - Under Review)

- Architected an end-to-end automated supply chain system managing the full order lifecycle from intake to delivery and reverse logistics.
- Developed a comprehensive centralized administrative dashboard for real-time data monitoring, intelligent data management, and seamless communication with third-party shipping providers.
- Engineered an AI-driven customer service module and smart inventory management system that automatically triggers restock requests via a human-in-the-loop approval mechanism.

Technologies: n8n, Advanced LLMs, REST APIs, Webhooks, Custom Dashboards.

Intelligent Lead Routing & Classification Engine

- Developed an automated workflow for real-time customer and patient data classification and routing using a highly optimized, cost-effective LLM architecture.
- Significantly improved classification accuracy and processing speed with minimal latency, ensuring data is instantly directed to appropriate channels.

Technologies: n8n, Advanced LLM APIs, Custom Prompts, JSON Parsing.

Open-Source Dynamic Portfolio & CMS Dashboard [\[GitHub Repo\]](#) [\[Live Demo\]](#)

- Built a fully customizable web portfolio featuring an interactive admin dashboard for dynamic data management, released on GitHub as a reusable template.

Technologies: JavaScript, HTML5/CSS3, Firebase, REST APIs.

TheraDe - Portable Thermal Sensory Stimulation Device

- Designed and prototyped a closed-loop medical stimulation system for sensory threshold evaluation and neuro-rehabilitation therapy with real-time temperature regulation.

Technologies: ESP32, Peltier Module, DRV8873H, C++, EasyEDA, Feedback Sensors.

TECHNICAL SKILLS

- **AI & LLM Engineering:** Advanced Prompting, Hallucination Mitigation, Cost-efficient LLM Integration, Vibe Coding, OpenAI API, Claude.
- **Automation & Integration:** n8n, Make, Custom Webhooks, JSON Data Parsing, Telegram API, Gmail API, OAuth2.
- **Healthcare Technology:** Clinical Workflows Understanding, Medical Hardware Prototyping, HealthTech Automation Systems.
- **Backend & Hardware:** Firebase, Supabase, API Development, ESP32, EasyEDA, Git/GitHub.

SOFT SKILLS

- Analytical Problem Solving & Troubleshooting
- Critical Thinking & Workflow Optimization
- Rapid Learning & Adaptability to New Technologies
- Time Management & Task Prioritization
- Cross-functional Teamwork & Professional Communication

EDUCATION

Bachelor of Physical Therapy (B.Sc.)

Expected Graduation: 2029

Faculty of Physical Therapy, Kafr El-Sheikh University

- General Grade: Very Good (GPA: 3.65)

CERTIFICATIONS & PROGRAMS

- Global Consumer Intelligence World 2026 – The University of Tokyo (2026)
- AI Automation & Integration Track – Digital Egypt Pioneers Initiative (DEPI) (2026)
- Oracle AI for You – Oracle MyLearn (2026)
- Applied Prompt Engineering & Agent Systems (2026)
